- Chang'e 6 will make an **attempt to land on the northeastern side of the vast South Pole-Aitkin Basin**, which is also known as the **oldest impact crater in the solar system.**
- On Chang'e-6, China is set to carry **payloads from Pakistan** along with countries like **France, Italy, and Sweden.**
- Pakistan's miniature/nano satellite **ICUBE-QAMAR CubeSat**
- It carries **two optical cameras and will capture images of the Moon's surface.**
- The mission **will be launched from Hainan province in China**

Oldest Evidence of Earth's Magnetic Field Found in Rocks

Oldest Evidence of Earth's Magnetic Field Found in Rocks/पृथ्वी के चुंबकीय क्षेत्र का सबसे पुराना साक्ष्य चट्टानों में मिला

- The Geologists at MIT and Oxford University collected rock samples from the Isua Supracrustal Belt in Greenland, a region known for its ancient rock formations.
- The researchers determined that the rocks bear the oldest remnants of Earth's early magnetic field, about 3.7 billion years old, with a magnitude of at least 15 microtesla.
- Previous studies have shown evidence for a magnetic field on Earth that is at least 3.5 billion years old.

- This finding suggests Earth's conditions may have been habitable earlier than thought, with a stable magnetic shield playing a crucial role.
- The magnetic field protects the planet from harmful solar radiation and cosmic rays, sustains the atmosphere, and allows liquid water essential for life.
- By analyzing the magnetic properties and orientation of iron-oxide minerals, researchers determined the ancient field's strength
- Today, Earth's magnetic field measures around 30 microtesla.
